

THE NEXT GENERATION VARIABLE PORT VALVE

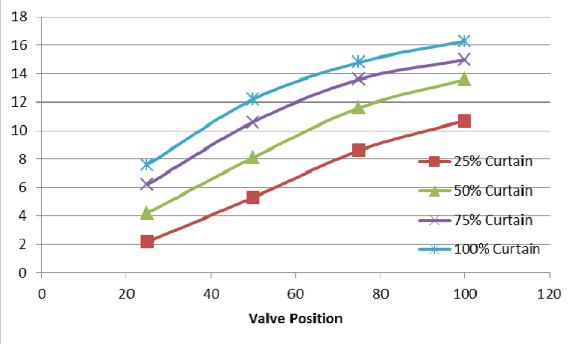

FLEX FLOW

Flex Flow's revolutionary, cost-effective design makes it the **Next Generation Variable Port Valve**. Flex Flow's robust design ensures it will preform in the harshest of environments. The variable port allows for the flexibility to matchthe valve opening to the maximum flow range, yielding more precise control. The shaft and universal mounting pad are conducive to a variety of actuators, making it simple and easy to install.

The innovative design of the Flex Flow valve allows the user to match the valve size to the line size and the variable port adjustment to span the opening to match the flow. The crative drum concept linearizes the flow from full-open to full-closed allowing for greater accuracy in control.

This matience-free product is ideal for industrial flow-control applications and is capable of handling a wide variety of gases and pressures.
